Beaker

A beaker is a simple container for stirring, mixing and heating liquids commonly used in many laboratories. Beakers are generally cylindrical in shape, with a flat bottom. Beakers are available in a wide range of sizes, from five millilitre up to several litres. RXSOL produces all their beakers in a quality borosilicate glass (3.3), as per International Standards.

Burettes

A burette (also buret) is a vertical cylindrical piece of laboratory glassware with a volumetric graduation on its full length and a precision tap or stopcock, on the bottom. It is used to dispense known amounts of a liquid reagent in experiments for which such precision is necessary, such as a titration experiment. Our RXSOL Burettes are extremely accurate & made as per international standards.

Flasks (Conical)

An Erlenmeyer flask, commonly known as a conical flask or E-flask, is a widely used as laboratory flask which features a conical base and a cylindrical neck. They are usually marked on the side (graduated) to indicate the approximate volume of their contents. we produce all our flasks as per the international Standards.

Pycnometers

The pycnometer (from the greek puknos, meaning "density" also called pyknometer or specific gravity bottle), is a flask with a close-fitting ground glass stopper with a fine hole through it, so that a given volume can be accurately obtained. This enables the density of a fluid to be measured accurately, by reference to an appropriate working fluid such as water or mercury, using an analytical balance.
